**DETAILED ACTION**

***Oath/Declaration***

1. Oath and declaration filed on 4/29/2002 is accepted.

***Information Disclosure Statement***

2. The prior art documents submitted by applicant in the Information Disclosure Statement filed on June 19,2002 have all been considered and made of record (note the attached copy of form PTO – 1449).

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 – 36 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for optoelectronic or photonic device having a support structure having the position changes by modifying a portion of the material of the support structure including at least one of density change and an internal stress change and also crystalline phase changes. More specifically, the current specification

Art Unit: 2873

does not enable any person in the skilled in the art to which it pertains, or which it is most nearly connected, to make the invention commensurate in scope with these claims without undue experimentation. To support the assertion the examiner notes that the specification is completely silent regarding the support structure material change, what are the source use to change the support structure material. In fact, the only mention active alignment process.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The closest prior art

Bourcier et al (6,512,642 B1) discloses method and structure for aligning optical elements.

Hiraayama et al ( 5,274,649 ) discloses wavelength – tunable distributed – feedback semiconductor laser device.

Verdiell et al (5,870,417) discloses thermal comensator for waveguide DBR laser source.

Waarts et al (5,933,271) discloses optical amplifiers providing with high energy levels.
